Research Experience

- ❖ **Hybrid Robotics, University of California, Berkeley**, Berkeley, CA   ***July 2023 – Present***
    - **Prompt a Robot to Walk with Large Language Models**: Using LLM directly outputs the low-level action to make a robot walk.
    - **Point-goal Navigation for Quadrupedal Robots**: AI Habitat was utilized for training navigation, while legged_gym served for locomotion training. Our goal is to explore the mutual influence between the two aspects.
- ❖ **Institute for Interdisciplinary Information Sciences, Tsinghua University**, Beijing, China   ***September 2021 – Present***
    - **Locomotion for Humanoid Robot:** Train an RL policy for our custom humanoid robot and address the sim-to-real transfer problem.
    - **Reinforcement Learning with Partial Order Representation**: Improve the sample efficiency of reinforcement learning by capturing monotonically changing physical quantities in the environment.
    - **Grounding Language Model by Detecting and Recovering from Plan-Execution Misalignment**: Use LLMs to detect exceptions and re-plan in real-time. This dual-role approach, where LLMs assist in high-level planning and generating constraints that can indicate misalignment during execution.
    - **Pour Water Task on A Mobile Manipulator**: 1. Use ROS to control the mobile manipulator to complete the pouring task. 2. Use more accurate observation as a teaching model to train students using image input.
